

La Marie

Philippe Starck

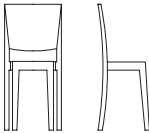

The world's first completely transparent chair, formed in a single polycarbonate mould. La Marie combines an essential design with an exceptionally robust and light structure to generate an intangible quality. An ingenious combination of lightness and strength, the result of a painstaking and meticulous research into its polycarbonate material, this item is scratch and shock resistant. In addition to the crystal version, La Marie is available in four additional shades: violet, light yellow, clear orange and rose orange.
