

Kartell

Panier Ronan et Erwan Bouroullec

"A very simple "panier" for various intuitive purposes."
Ronan et Erwan Bouroullec

Technical Sheet

Panier is the first object to be signed by Ronan and Erwan Bouroullec for Kartell. Rigorous technological and functional research resulted in a container basket in a simple but very communicative shape. Comprised of four modules to form the four fourths of a shiny, transparent circle bursting into rays of light. The fourths are attached to each other using opaque joints and stability is achieved simply by using inserts.

Panier is a container which can be closed on one side with a transparent lid in polycarbonate and it can easily be used as an end table or as a magazine rack.

Panier is made of transparent polycarbonate and is available in a variety of colours. It's a practical and eclectic object with an attractive and playful appearance.

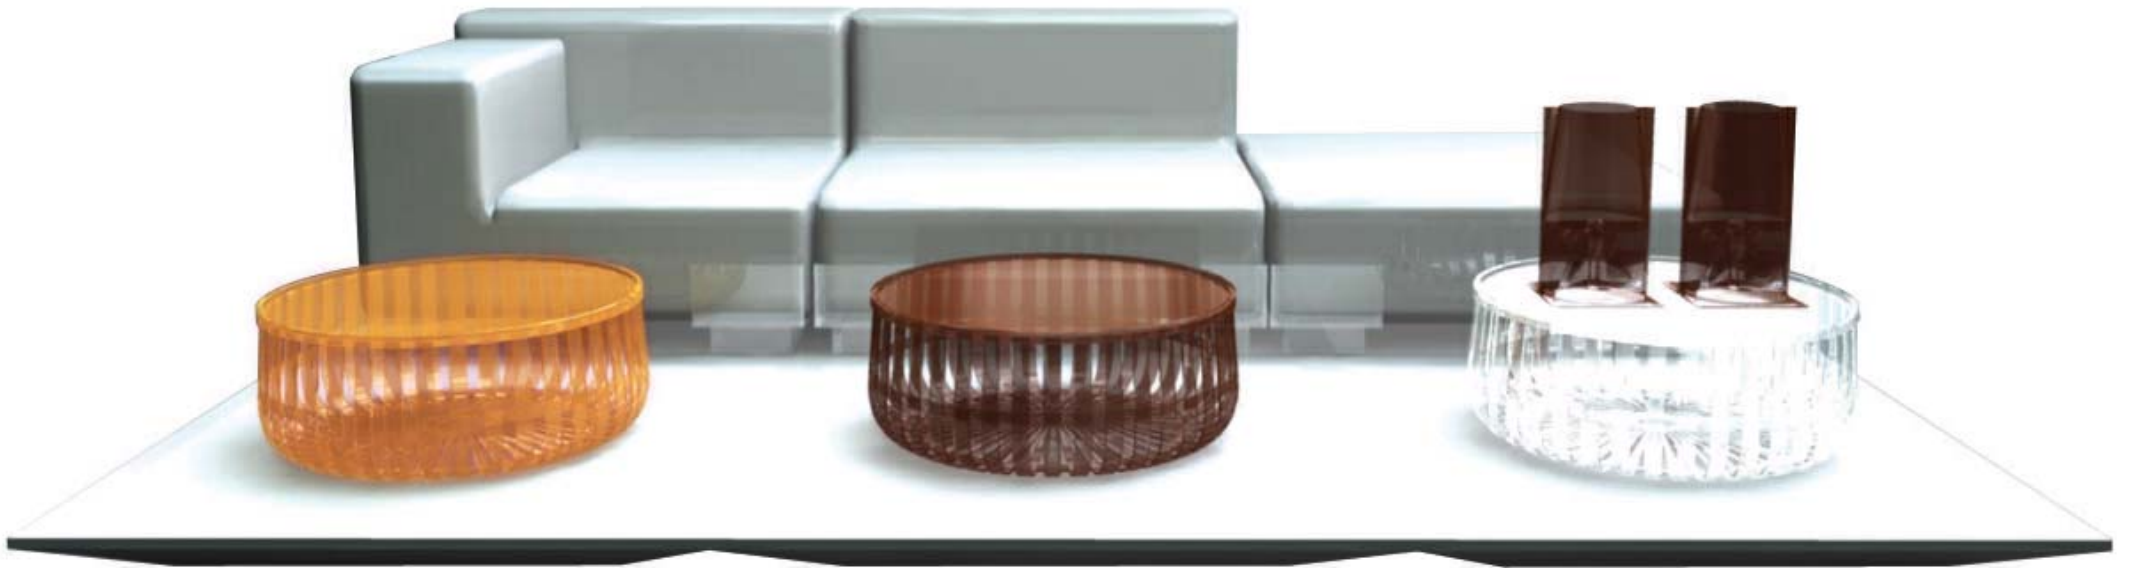

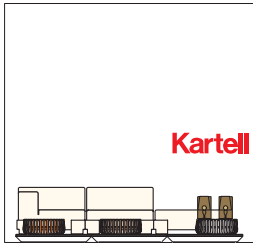

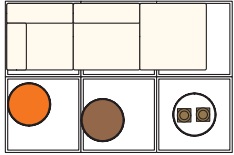

Material
Transparent or smooth batch-dyed polycarbonate

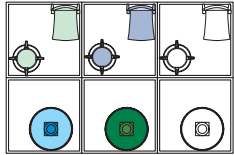

diameter ø		height	weight kg
