

logico soffitto, soffitto mini, soffitto micro, soffitto nano

design: michele de lucchi, gerhard reichert - 2001, 2002, 2003, 2006

Logico nasce dall'idea di organizzare un sistema a partire dalla diffusione della luce: il diffusore in vetro soffiato è utilizzato in apparecchi di differenti versioni e dimensioni e la sua forma modulare e organica si presta a comporre numerose aggregazioni per generare differenti composizioni di luce. Il diffusore in vetro soffiato, finitura seta lucida, conferisce un aspetto materico sia quando la lampada è spenta che quando è accesa. Il vetro seta è una miscela di pasta di vetro con sali opalini distribuiti in modo non uniforme. Il bordo inferiore del diffusore è tagliato con un utensile diamantato. Le geometrie del diffusore, complesse e modulari, permettono l'accostamento secondo vari schemi, come tessere di un mosaico. Logico soffitto micro è componibile a più elementi su progetto personalizzato. Struttura in metallo verniciato. Emissione di luce diretta e diffusa. Colore: bianco e grigio alluminio.

Logico is originated from the idea of organising a system starting from the light diffusion: the sophisticated blown glass diffuser is used in different versions and its modular and organic shape lends itself to the creation of numerous light compositions. The blown glass diffuser with polished-silk finish, gives a materic aspect when the lamp is on or when it is off. A unique combination of glass finishing methods provides a polished- silk finish. The lower edge of the diffuser is cut with a diamond-edged blade. The design, complex and modular, allows creating numerous compositions of lights and forms. Logico soffitto micro is assembled with numerous elements on project request. Painted metal structure. Direct and diffused light emission. Colour: white and aluminium grey.

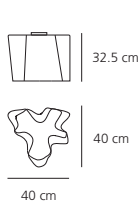

Logico est né de l'idée d'organiser un système à partir de la diffusion de la lumière: le diffuseur en verre soufflé est utilisé pour des lampes de différentes versions et dimensions et, sa forme modulaire et sinueuse, permet de nombreuses combinaisons capables de produire autant de compositions de lumière. Le verre finition soie est un mélange de pâte de verre avec des sels opalins répartis de manière non uniforme. Le bord inférieur du diffuseur est taillé au diamant. Les géométries des diffuseurs, complexe et modulaire, permettent divers schémas d'assemblage, comme des pièces d'une mosaïque. Logico soffitto micro est composé de plusieurs éléments sur demande de projet. Structure en métal verni. Emission de lumière directe et diffuse. Couleurs: blanc et gris aluminium.

Logico wurde aus der Idee geboren, ein Beleuchtungssystem in Form und Funktion von Grund auf neu zu gestalten. Der raffinierte Schirm aus mundgeblasenem Glas ist in verschiedenen Versionen erhältlich, und seine modulare und körperhafte Form gestattet es, mehrere Leuchten zu kombinieren und somit vielerlei Licht- und Formgestalten ins Leben zu rufen. Der Schirm aus geblasenem Glas in seidig glänzendem Finish verleiht der Leuchte ein gegenständliches Aussehen, sowohl wenn sie ein-, als auch wenn sie ausgeschaltet ist. Das Glas des Leuchenschirms enthält ungleichmäßig verteilte opalfarbige Salze. Der untere Rand des Schirms ist mit einem Diamantwerkzeug geschnitten. Die komplexen und modulare geometrischen Formen des Schirms ermöglichen die Erstellung verschiedener Muster wie durch Steine eines Mosaiks. Auf Projektanfrage sind mehrere Elemente kombinierbar. Rahmen aus lackiertem Metall, Direkte und gestreute Lichtverteilung. Farben: Weiß und Aluminiumgrau.

Logico nace de la idea de organizar un sistema a partir de la difusión de la luz: el refinado difusor de cristal soplado se construye en versiones y dimensiones distintas y su forma modular y sinuosa, se presta para componer combinaciones de luz diferentes. El difusor de cristal soplado con acabado de seda semitransparente, confiere un aspecto materico cuando la lámpara está encendida y cuando está apagada. El cristal seda es una mezcla de pasta de cristal con sales opalinas distribuidas de modo no uniforme. El borde inferior del difusor está cortado con un utensilio adiamantado. Las geometrías del difusor, complejas y modulares, permiten el acercamiento según varios esquemas, como tejer un mosaico. Logico soffitto micro se compone, a partir de varios elementos bajo pedido. Estructura de metal pintado. Emisión de luz directa y difusa. Color: blanco y gris aluminio.
